

Delta Engineering – Electrical assembler

Electrical assembler

- You will be responsible for the electrical installation of our machines. In other words, you will be responsible for installing the electrical and pneumatic cabling.
- You will make the connections and carry out the wiring, and connect the electrical cabinets.
- You will ensure that all work complies with the applicable safety standards and regulations.
- You have experience of working with Eplan and can accurately read and interpret electrical diagrams.
- You will ensure that everything relating to electricity and automation functions correctly.

Your profile

You hold an A2 qualification in electrical engineering or electromechanics, or have equivalent experience.

You already have relevant experience in residential or industrial electrical work.

Experience in mechanical engineering is an advantage.

You can work independently, but also function well as part of a team.

You enjoy seeing things through to completion and take pride in the quality of your work.

You're fluent in Dutch and have a good basic knowledge of English.

Our offer

- A secure, varied role within a young, growing company and an enthusiastic team. You'll be working for a financially sound company with a leading reputation and a clear vision for the future.
- You can count on ongoing training.
- Your remuneration will be commensurate with your profile and experience.
- You'll be covered by our group insurance and hospitalisation insurance, and you'll be entitled to meal vouchers.
