

Delta Engineering – Maintenance Technician

Maintenance Technician

As a **Maintenance Technician**, you will play an essential role in ensuring the optimal and safe operation of our entire equipment fleet by performing preventive and corrective maintenance on electrical installations. You will have the opportunity to use your analytical mindset to conduct periodic inspections of electrical panels, motors, and control systems, efficiently diagnosing and correcting any technical faults. In an environment that values safety and teamwork, you will collaborate closely with other departments to quickly resolve technical challenges, minimize downtime, and maintain the company's highest quality standards.

Responsibilities:

- Performs preventive and corrective maintenance on electrical installations and equipment.
- Conducts periodic inspections of electrical panels, motors, sensors, and control/security systems.
- Diagnoses and remedies electrical and electronic faults.
- Complies with internal procedures and safety standards during all activities.
- Collaborates with other departments to resolve technical issues and reduce execution downtime.

Your profile:

- Minimum 10 years of experience in the electrical field.
- Qualified electrician certification.
- Knowledge of electronics – mandatory.
- Intermediate level of English.
- Intermediate PC operating skills.
- Strong diagnostic and technical problem-solving skills.
- Positive attitude, teamwork spirit, and results-oriented mindset.
- Reliability, responsibility, and attention to detail.

Our Offer:

- We offer an exciting job in a collaborative, growth-oriented work environment.
- Private health insurance at Regina Maria (upon completion of the first 3 months).
- Free transportation provided from Baia Mare and Seini.
- Meal tickets worth 40 RON/worked day.
